Panasonic CONNECT

Realize skillless components supply

Auto Setting Feeder

New feeder that greatly reduces working time by automating components supply work in the mounting process

Key Features

- Automates the process of setting new tape components, reduces approximately 60 seconds including pre-processing. (Current feeder ITF: approximately 90 seconds → Auto Setting Feeder ASF: approximately 30 seconds)
- Realized automatic loading of next componentss by optional Loading Unit （Eliminates splicing work, and saves its work time)
- Dramatically eliminates the short time breakdown caused by tape supply components
- Supports 8~104 mm width tape components (Paper, Emboss)
- New ASF + its cart can be attached to the current Panasonic equipment (NPM series) = Retrofit policy
