

Auto Setting Feeder for autonomous parts supply

Auto Setting Feeder

Autonomous setting and loading are key points for automating the supply of parts. The revolutionary Auto Setting Feeder (ASF) offers the following key points of innovation: Automatic supply of all tape reels for paper and embossing with a width from 8mm to 104 mm
Functional revolution: Reduction of work effort, Reduction of loss rate and Improvement of utilization rate Unit for improving work efficiency in terms of tape supply and maintenance

Key Features

Automates the process of setting new tape parts, reduces approximately 60 seconds including pre-processing.
(Current feeder ITF: approximately 90 seconds → Auto Setting Feeder ASF: approximately 30 seconds)

Realises automatic loading of next parts by optional Loading Unit Eliminates splicing work, and saves its work time)

Drasatically eliminates the short time breakdown caused by tape supply part

Supports 8~104 mm width tape parts (Paper, Emboss)

New ASF + its new cart can be attached to the current Panasonic equipment (NPM series) = Retrofit policy
