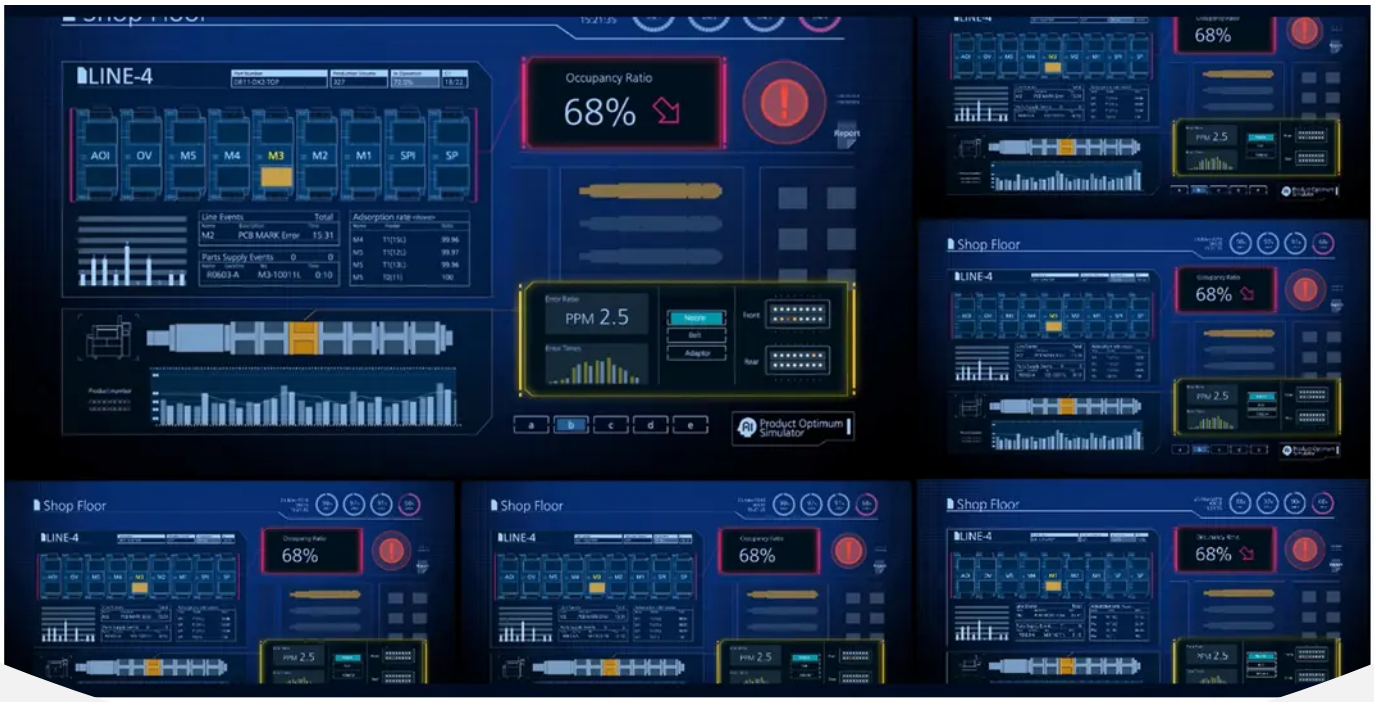
Panasonic CONNECT



SMT-Specialized Production Planning Solution

Manufacturing operations optimizer (MFO)

SMT production planning requires inputting 4M information—Man, Material, Machine, and Method—while considering not only production sequence but also production programs, which has long troubled many planning personnel. By inputting 4M information, MFO mixes data on the number of workers and their skills, quantities of components and jigs, equipment configuration, Dual/Single and Top/Bottom settings with order and delivery deadline information to create a production plan on your behalf that minimizes production lead time.

Key Features

- Production Floor Efficiency Through Production Planning Optimization
- Determination of Optimal Component Arrangement Through Automatic Optimal SMT Program Creation
- Integrated Management Through Production Planning Coordination and Performance Data Collection
